

ReadIt App

Developed with .NET Core and Node JS

1. Installing .NET SDK

<https://dotnet.microsoft.com/en-us/download/dotnet/8.0>

2. Installing VS Code

- From Google, Type: Download VS Code
- <https://code.visualstudio.com/download>
- Pin to the Taskbar

3. Installing Extensions

- Extensions are pieces of code that integrate into the development environment and help us work with various languages, platforms, cloud, etc
- **C#** and **Azure Tools** Extensions

4. Troubleshooting the Local Catalogue

In the next lecture, you will run the catalogue component locally on your own computer.

In most cases, this goes smoothly without any problem. In some cases, however, there might be some problems, and here are some steps to help you troubleshoot them:

1. If you're on Windows and when running the code, you get the following error in the Output window: **Unable to find fallback package folder 'C:\Program Files (x86)\Microsoft\Xamarin\NuGet\ :**

There's a problem in the NuGet package manager configuration. Please run the following steps, and this should resolve the problem:

- Remove the **nuget.config** file from the **%appdata%\NuGet** folder
- Restart VS Code
- Run the project, and it should work fine.

5. Running the Catalog Locally

- Check the Moodle site to download ReadIt App Catalog
- Move the Catalog folder to Drive C
- Right-click after opening the folder or Type CML on the search bar
- Type code . (Code dot)
- Press F5 to run the code

6. Going Through the Code
